

Brussels Development Briefing n. 42

Women entrepreneurs – key players in ACP agribusiness development

17th September 2015, 9h00-13h00

ACP Secretariat, 451 Avenue Georges Henri, 1200 Brussels, room C

<http://brusselsbriefings.net>

1. Context

Research has shown the value of women's economic empowerment in development programs: firstly, economic empowerment is one of the most powerful routes for women to achieve their potential and advance their rights; secondly, since women make up the majority of the world's poor, meeting poverty-reduction goals requires addressing women and their economic empowerment; thirdly, discrimination against women is economically inefficient and national economies lose out when a substantial part of the population cannot compete equitably or realize its full potential. Moreover, working with women makes good business sense: when women have the rights skills and opportunities, they can help business and markets grow. Finally, women who are economically empowered contribute more to their families, societies and national economies. It has been shown that women invest extra income in their children, providing a route to sustainable development.¹

Women make significant contributions to the rural economy in all regions of the world. In developing countries, women make up on average about 40 percent of the labour force, ranging from 20 percent in Latin America to 50 percent or more in certain parts of Africa and Asia. Women's role range from being cultivators on their own or other's plots—as unpaid or paid workers, employers or employees—to being wage-labourers in on- and off-farm enterprises, alongside their key role as providers of unpaid care in their households and communities.

However, in many settings women face more constraints than men in accessing key productive resources such as land and to services such as credit, extension and social protection. They also face wage discrimination in rural labour markets and often work without remuneration on family farms. This limits their capacity to contribute to agricultural production and take advantage of new opportunities.

To find jobs in the formal economy or to start and develop businesses, women face more challenges than men due to lack of policies and programs to support and encourage entrepreneurial activity, excessive norms and regulations, and restricted access to credit. Low rates of female land ownership can hinder access to financial assets that are necessary to set up a business. Inequalities in rights and entitlements limit women's access to and control over resources that are crucial to starting and consolidating a sustainable enterprise.

Enabling women to participate fully in household and community decision-making also translates into improved well-being and better prospects for children, thereby reducing inter-generational poverty and contributing to long-term socio-economic development. Therefore, closing the "gender gap" in access to assets, resources, services and opportunities has been identified as one of the most effective approaches to combat rural poverty and promote agriculture and rural development.²

2. Towards increased women's participation in agribusiness

Women are clearly an important part of the agricultural labour force, but agriculture and agricultural value chains are equally important to women as source of employment. Women

¹ Golla, A.M. et al., Understanding and Measuring Women's Economic Empowerment. 2011.

² FAO, Rural Women's Economic Empowerment. 2014. <http://www.fao.org/3/a-at890e.pdf>

are a significant entrepreneurial force as owners of farms, input supply stores, service delivery businesses, and export firms whose contributions to local, national, and global economies are far reaching.

Gender issues are overlooked in most value chains, though they fundamentally shape the totality of production, distribution, and consumption within an economy. From production to processing, gendered patterns of behavior condition the jobs and tasks of men and women, the distribution of resources and benefits derived from income generating activities in the chain, and the efficiency and competitiveness of value chains in the global market. A growing body of economic and empirical evidence suggests that addressing gender issues in value chains can improve programs' efforts to achieve both greater gender equity and more effective value chain operations.³

Addressing gender-based constraints in employment and productivity can increase competitiveness. When more than half of a country's potential labor force is not used efficiently, competitiveness with other countries is negatively affected.

A gender approach to value chain analysis and development allows for the consideration of groups and individual men and women's access to productive activities; differential opportunities for upgrading within the chain; gender-based division of activities; and, how gender power relations impact economic rents among actors throughout the chain. Gender analysis is needed to understand value chain operations and identify the gender relations that structure how smallholder households are organized and how they interact with other firms and economic processes.⁴

Evidence shows that female farmers are largely excluded from modern contract-farming arrangements due to their lack of secure control over land, family labour and other resources required in order to guarantee delivery of a reliable flow of produce. One example in this respect is the Kenyan fresh fruit and vegetable export sector, where women comprise fewer than 10 percent of the farmers involved in smallholder contract-farming schemes. Men control the contracts, nevertheless much of the farm work on contracted plots is performed by women as family labourers. For example, in 70 percent of the cases of sugar contract-farming in South Africa, the principal farmer on the sugar-cane plots is a woman.⁵

The preference of food companies to contract with men is driven by companies' need to secure access to land and labor for a guaranteed supply of primary produce. Women are excluded because they lack statutory rights over land and because they have less authority over family labor compared to their husband and male siblings.⁶

In sharp contrast to high-value contract-farming, there is no bias in favor of men in the labor market effects of modern supply chains. In fact, a large share of the thousands of employees in the Sub-Saharan horticulture agro-industry is female. In Senegal, 90% of the agro-industrial employees in the French bean sector and 60% in the cherry tomato sector are female. Also in other countries the share of female laborers in the FFV agro-industry is particularly high; for example in the flower industry in Kenya and Uganda (75%) and the fresh vegetable sector in Zambia.

However, some new forms of organization in supply chains for export-oriented crops and agro-processing have created better-paying employment opportunities for women in many countries than existed before. Women dominate employment in many of the high-value agricultural commodity chains in sub-Saharan Africa and Latin America. New jobs in export-oriented agro-industries may not employ men and women on equal terms, however they often provide better opportunities for women than exist within the confines of traditional agriculture

and can also be instruments of change with significant implications for women and rural development.⁷

In Senegal, the growth of modern horticulture supply chains has been associated with direct beneficial effects for rural women and reduced gender inequalities in rural areas. Evidence shows that women benefit more from employment in large-scale estate production and agro-industrial processing than from high-value smallholder contract-farming in which they often provide unpaid family labour.⁸

3. Access to finance for women entrepreneurs

Women entrepreneurs, particularly in rural areas, often experience difficulties accessing relevant financial products and services due to a lack of appropriate products, information, understanding of their needs and collateral.

Women entrepreneurs running SMEs play a significant role in contributing to economic development by creating jobs, boosting economic growth, and harnessing the productive capacity of women. Estimates show that there are 8-10 million formal SMEs across the world fully or partially owned by women. Enhancing women's economic opportunities and entrepreneurship could also contribute to lessen gender gap, boost per capita income growth, and generally reduce poverty.

Nonetheless, notable financial and non-financial barriers block women-owned SME's potential as economic drivers. The financial barriers that women-owned SMEs confront, such as unfavourable lending policies, lack of collateral etc., critically restrict their access to finance. In spite of the fact that both men and women are affected by these constraints, women experience greater vulnerability compared to their male counterparts.

These financial and non-financial constraints represent obstacles to business development for women-owned SMEs at one or more stages of their business cycle: assessment, start-up, growth, maturity, and decline. Consequently, there is a need to define and tackle the credit requirements of SMEs on the whole and particularly of women-owned SMEs and hindrances that affect them in order that women entrepreneurs are able to fulfil their potential both in their business and society.⁹

Business Development Services are not readily available in many rural areas and affect the growth of rural women's businesses. As a consequence, women are left to rely on friends and family for management decisions and other support to their businesses. Many women rely on personal funds for their investment needs.

Entrepreneurs require access to capital not only for initial investments to start businesses but also ongoing access to capital to operate and expand their businesses.

Microfinance institutions, Savings and Credit Cooperative Organizations (SACCOs), other revolving capital funds, and moneylenders address women's immediate credit shortages.

But interest rates are high, the amounts that can be accessed are often small, and the consequences for default can be dangerous, particularly with moneylenders.

Reforming collateral-based loan policies and practices has become a part of many policy agendas and financial institutions are encouraged to design "women-friendly" financial products, for example, non-collateral-based lending, asset leasing, or embedded financial services in buyer contracts.¹⁰

4. The way forward

Women's economic empowerment is a prerequisite for sustainable development and pro-poor growth. Achieving women's economic empowerment requires sound public policies, a holistic approach and long-term commitment and gender-specific perspectives must be

integrated at the design stage of policy and programming. Women must have more equitable access to assets and services; infrastructure programmes should be designed to benefit the poor, both men and women, and employment opportunities must be improved while increasing recognition of women's vast unpaid work. Innovative approaches and partnerships include increased dialogue among development actors, improved coordination amongst donors and support for women organising at the national and global level.¹¹

Rural women increasingly run their own enterprises, yet their socio-economic contributions and entrepreneurial potential remain largely unrecognized and untapped. They are concentrated in informal, micro-size, low productivity and low-return activities and face particular challenges entering new and lucrative markets and expanding their businesses. Enabling and gender responsive policies, services and business environments are crucial to stimulate the start up and upgrading of women's businesses and thereby help generate decent and productive work, achieve gender equality, reduce poverty and ensure stronger economies and societies.

Women's economic empowerment also means voice and representation in decision-making, and strong business networks. The rigidities of some gender-blind policies, institutions, programs, and projects are perpetuated by the underrepresentation of women as policy makers or their limited participation in policy and institutional change processes.¹²

Little sex-disaggregated data on entrepreneurship in agriculture is available. There is a need to improve the collection and analysis of reliable data on rural women's enterprises to understand their needs and realities and inform policies, including generating better indicators, programme/project evaluations, lessons on what does or does not work and why, and feedback mechanisms.

Training and skills upgrading are needed to strengthen women entrepreneurs' business management, marketing and technical skills, with an emphasis on growth sectors, green technologies and safe and sustainable farming and agro-processing practices (standards, safety measures). It will contribute to upgrade clusters/sectors to support the transition of women-led enterprises from informal to formal status.

Objectives of the Briefing

To improve information sharing and promote networking, CTA, the DG DEVCO from the European Commission, the ACP Secretariat, Concord and various media organise bimonthly briefings on key issues and challenges for rural development in the context of EU/ACP cooperation. The Briefing on 17th September 2015, will discuss the key challenges and new opportunities to enhance women's led agribusiness. The Briefing will: i) review women's entrepreneurs successes and the lessons learned from research and practice; ii) promote the exchange of information on best practices and drivers of success; iii) feed into the debate various perspectives on policy options.

Target group

More than 150 ACP-EU policy-makers and representatives of EU Member States, embassies of ACP countries, civil society groups, research networks and development practitioners, and international organisations based in Brussels.

Available material

Input and comments before, during and after the meetings will be included in the Briefings blog: <http://brusselsbriefings.net/>. A short report and a Reader in printed and electronic format will be produced shortly after the meeting.

Brussels Development Briefing n. 42

Women entrepreneurs – key players in ACP agribusiness development

17th September 2015, 9h00-13h00

ACP Secretariat, 451 Avenue Georges Henri, 1200 Brussels, room C

<http://brusselsbriefings.net>

Programme

8h00-9h00 Registration and Welcome Coffee

9h00-9h15 Introduction of the Briefing: *Isolina Boto, Manager, CTA Brussels Office*

Introductory remarks: *Viwanou Gnassounou, Assistant-Secretary General of the ACP Group of States in charge of Sustainable Economic Development and Trade; Jean-Pierre Halkin, Head of Unit, Rural Development, Food Security, Nutrition, European Commission/EuropeAid European Commission/Europaid; Michael Hailu, Director of CTA*

9h15-11h00 Panel 1: Enhancing women's-led agribusiness development

This panel will review the key challenges and opportunities for women entrepreneurs in the agrifood sector of ACP countries and the lessons learned from research and practice.

Panelists:

- Gender dimensions of agribusiness development
Stephanie Barrientos, Professor, Institute of Development Policy and Management and Associate Director, Brooks World Poverty Institute, University of Manchester
- Factors of competitiveness of women entrepreneurs and their participation in trade
Christian Planchette, Senior Training Officer, Enterprise Competitiveness, International Trade Centre (ITC), United Nations
- Agribusiness development in the Pacific: challenges and opportunities for women
Mereia Volavola, CEO, Pacific Island Private Sector Organisation (PIPSO)
- Support from EIB to women entrepreneurs and to the agribusiness sector
Jacqueline Church, Policy Officer, European Investment Bank (EIB)

11h00-11h15 Coffee break

11h15-13h00 Panel 2: Women's entrepreneurs successes in ACP regions

This panel will look at examples of successes in women's-led business and will analyse the drivers of success for upscaling or replicating.

Panelists:

- Adding value locally through differentiated fish product
Lovin Kobusingye, Managing Director, Kati Farms Uganda
- Pioneering a local food processing industry for improved nutrition
Simone Zoundi, CEO, Sodepal, Burkina Faso
- Organic Farm to Table: creating a sustainable supply chain supporting women
Alberta Vitale, Associate Director, Women in Business Dev. (WIBDI), Samoa
- Production and Trade of Coconut Oil in Guyana
Rosemund Benn, President, Pomeroon Women Agro-Processor Association, Guyana
- Cattle and maize production supplied to local market
Tepsy Ntseokane, Eve's Eden Farming Enterprise, South Africa

Conclusion

Networking Lunch
